

A public cloud assessment is a crucial process for organizations that are considering migrating to a public cloud platform or those that are already using public cloud services. Assessment areas can range from cost analysis to performance, scalability, fault tolerance, and security, to name a few. At ProCern Technology Solutions we employ an insightful pillars program, analyzing the most impactful areas of your deployment to gain a holistic understanding of your cloud landscape, for both current and future needs.

With the massive shift in cloud initiatives, there are now thousands of companies that can help with services like these.

How do you choose?

Are individual's credentials really telling you everything you need to know about a services partner, or is there more to it? Will prebuilt guidance designed for mass consumption be the right fit for your desired feedback? Does the service provider have experience in your field, and a deep enough understanding of what your requirements truly are?

Let's Connect

sales@procern.com

PROCERN.COM

Considering the near infinite possibilities in cloud deployments, you need truly expert guidance based on **experience**, not theory.

Experience that has built skillset to the point of being able to:

- Customize solutions with the vast capabilities the public cloud can offer
- Not simply buying the basics and underutilizing them
- Experts that have spent years working for the public cloud companies, building a deep understanding of what is possible today

FREE **Cost Optimization and** **Performance Analysis**

Zero Commitment

Trusting a new service provider is tough, no matter what you're told about credentials.

Experience our offerings first-hand!

Contact us today to schedule a free Cost Optimization and Performance Analysis of your cloud posture with zero commitment.

Unlock the potential of ProCern Technology Solutions and let us be your trusted cloud services partner.
