

App. Security

CUSTOMER FIRST DESIGN

Did You Know?

- OWASP reports that around 84% of all cyber attacks target the application layer!
- A survey by WhiteHat Security found that only about 40% of firms have a budget for AppSec.
- A report by Veracode reveals that 70% of applications have at least one security flaw in the initial scan.
- NIST states that ~90% of reported security incidents are via exploits against known vulnerabilities!

AppSec Services

Your Application Security Program, Unleashed!

A modern and mature software development lifecycle incorporates a robust application security (AppSec) program. However, an increasing number of companies are struggling to adopt and implement this essential security initiative. Business and security leaders find themselves overwhelmed with the influx of new AppSec tools available in the market, making it challenging to determine the appropriate starting point for a new program. In order to make informed business and operational decisions regarding their software, leaders require a comprehensive understanding of vulnerabilities and risks at a high level.

An effective AppSec program encompasses automation, orchestration, and an executive summary to effectively navigate the vast capabilities offered by security tools. Building a successful AppSec program involves assembling a diverse team, including software developers, security experts, and project managers. The magnitude of personnel required may seem daunting. However, ProCern is here to assist you. With our expertise in the AppSec field and access to a range of code scanning tools, we can expedite the maturation process for your company's new AppSec program, starting today.

YOUR OPTIONS

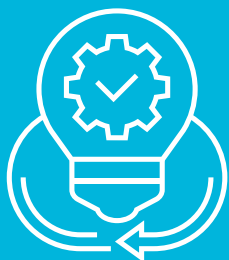

- Toolset Implementation
- Workflow Integration
- Reoccurring Monthly Service Blocks - (i.e. Staff Augmentation)
- Code Remediation
- Complementary Toolset Consultation, Demonstrations, and One-Time Scans!

CHALLENGE

- Adoption
- Integration
- Code Remediation
- Open Source Risk
- Release Pressure
- Lack of Education
- Filtering Noise
- Maturation

OBJECTIVES

- Help Developers Adapt
- Custom API Integration
- Outsource Remediation
- Scan Open Source Code
- Faster Code Development
- Enable Secure Coding
- Find What Matters
- Stop Doing The Minimum

"Our AppSec tools were taken from shelf-ware to fully integrated into our SDLC!"

"Off-loading our code remediation enabled us to meet our timelines."

"The ongoing support has enabled us to decrease our attack surface and sprints!"

SOLUTION

Maximize Your Application Security Investment With ProCern

Ensure that your attack surface is in check, before the bad guys try.

Realize the value expected pre-sale, with measurable ROI.

Demonstrate to your users that your app is safe.

Partner with ProCern Technology Solutions today to meet and exceed the objectives listed above, at a fraction of the cost of doing it yourself. We are a tried, trusted, and awarded service provider for multiple AppSec tools on the market today. We can take the heavy lifting of running your program off your plate, and enable you to only focus on what matters most, your business.

Your team cannot afford to treat security as an afterthought. It is crucial to integrate security measures as early as possible in the software development life cycle. ProCern is here to provide the necessary assistance to realign your security priorities effectively.

BENEFITS

MATURE YOUR APPSEC PROGRAM

There are numerous aspects that can be overlooked or missed during the implementation of a new code scanning tool within your software development lifecycle (SDLC). Drawing upon years of experience across diverse environments and working with companies having distinct security objectives, ProCern specializes in bridging those gaps and revealing blind spots in your SDLC's security capabilities.

FASTER CODE DEVELOPMENT

By relieving your developers of the burden of security concerns, our skilled staff enables your development team to concentrate on accelerating the production and advancement of code bases.

IMPROVED ADOPTION AND EDUCATION

One of the significant hurdles companies encounter is achieving full adoption of a new security tool by their developer team. Initiating a code scan can be intricate, analyzing reports can be laborious, and determining the starting point for code remediation can lead developers to frustration or resignation. Additionally, code scanning solely identifies vulnerabilities; it does not resolve them. ProCern is here to train and help your developers adapt in their approach to AppSec.
